

Clinical-first Electronic Health Record

Built for the practice of independent primary care medicine

Intuitive design and comprehensive functionality woven into modern technology that supports rather than disrupts your practice

Exceptional physician and patient clinical experience

Elation's powerful EHR lets you focus on delivering phenomenal patient care thanks to its clinical-first design. Our three-panel console and intuitive charting features streamline your visits. Unified workflows automate documentation, coding and decision-making, letting you maximize your time with the patient.

Reduced administrative burden

Electronic orders and results fit seamlessly into workflows and help reduce your administrative burden. Clinical integrations like ePrescribing and bidirectional immunization interfaces with state registries make delivering care a smoother and more efficient experience.

Care team engagement and alignment

A patient-centered approach to medicine is easier with our flexible care collaboration tools like the clinical profile, health maintenance, care gaps, care reminders, and more. Communicate electronically with outside providers using cross-organization Elation messaging, chart sharing and Direct messaging features.

Purpose-built to support primary care medicine

We are radically committed to clinical-first technology for the independent primary care community.

Everything you expect from an EHR, and more

All the tools you need and want, plus seamless clinical integrations and thoughtful care collaboration features.

Get up and running quickly

Receive the implementation, training, and support you need to get up and running quickly and migrate your data.

Keeping the focus on primary care

ePrescribing with EPCS + PMP integration

eFax, referral management + order tracking

Coding automation + dynamic charting tools

Point-of-care connectivity + integrations

Full chart search functionality

Care collaboration + interactive chart

Chronic disease management + advanced care planning

Population health + automated risk assessments

Clinical reminders + care gap closure

Dashboards + patient lists

Electronic pre-visit patient toolkit - forms, self-scheduling, and reminders

Secure patient portal, via web or iOS mobile app, with patient messaging

Seamless, HIPAA-compliant virtual care powered by Zoom

iOS mobile app for physicians

MIPS/CQM reporting

Restoring the joy of practice across the country

24,000 active clinicians

At 2,100 independent practices

Caring for 12.8M patients
