

Clinical Data Platform

Build longitudinal patient records with data from across the care continuum

Generate comprehensive clinical insights to drive better health outcomes and lower costs

Simple + fast

Aggregate data from across the care spectrum through direct connections from within your care network, or through Elation's suite of clinical integrations.

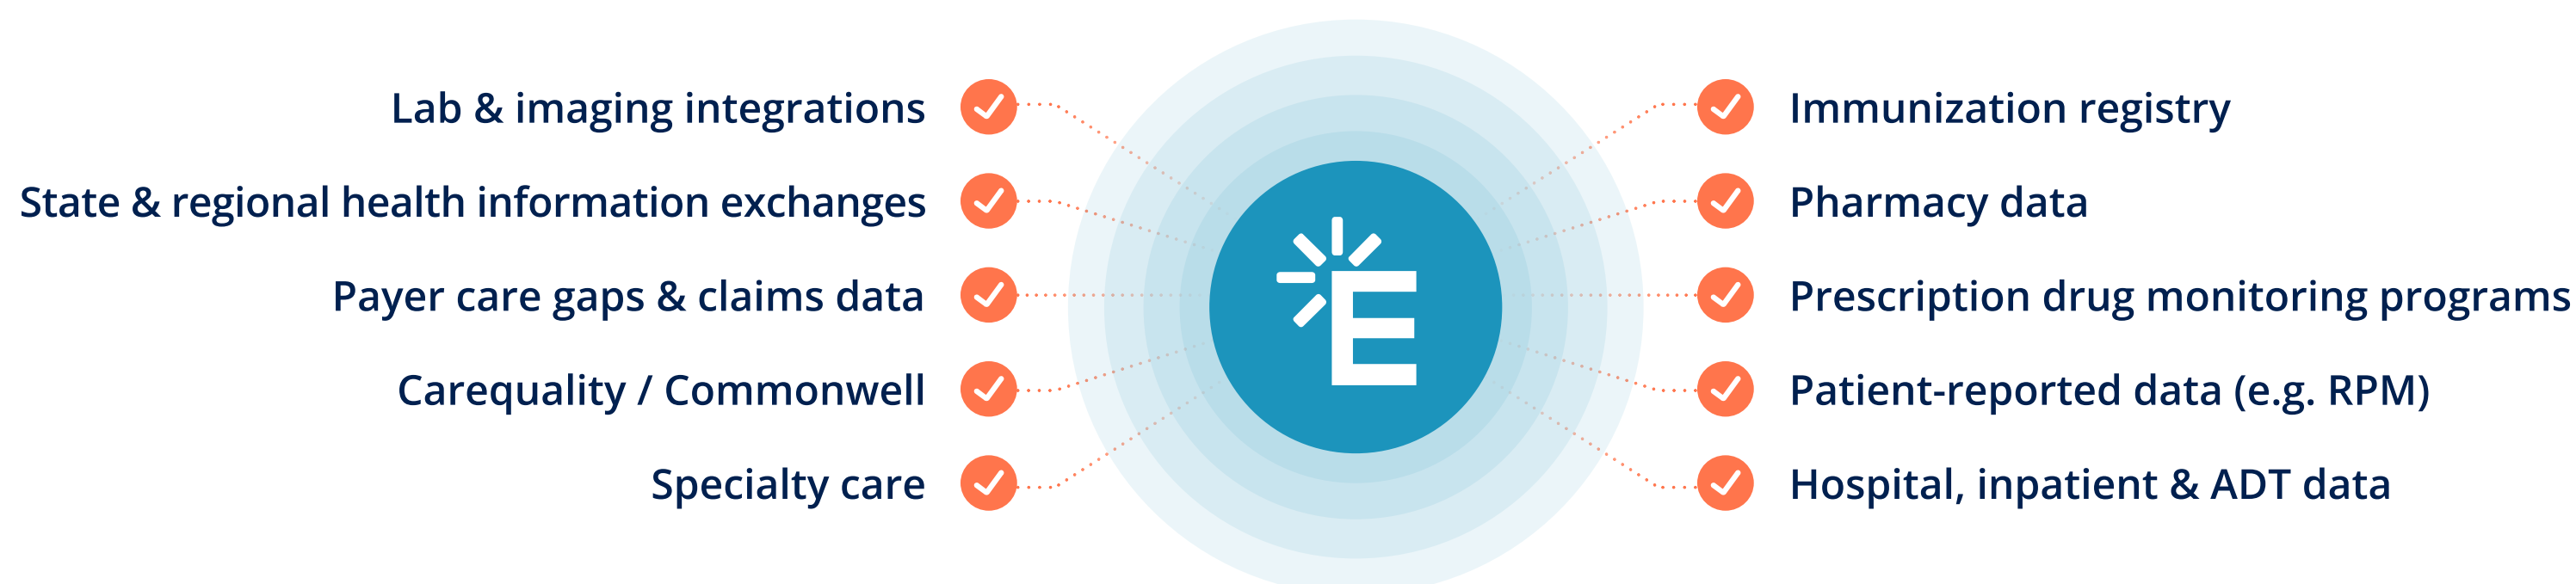

Robust

Structured and coded data, including CCDs, from HIEs, state programs, pharmacies, labs, and hospitals as well as payer care gaps and claims data.

Powerful

Leverage the power of our API, webhooks, and data streaming platform along with our hosted database solution to synthesize data from outside sources.

Key benefits

360° view

Ingest different types of data from outside sources to build a 360° view of your patients' care needs, supporting your enterprise in fully managing patient health outcomes.

Transform data

Store, process, and transform data into actionable insights at the point-of-care, empowering your physicians with the information they need to make effective clinical decisions.

Panel management

Populate in-app dashboards to stratify patients, enable personalized care, and support patient education and outreach efforts.

Analytics + insights

Power analytics to gain real-time visibility into performance, and identify clinical and operational workflow interventions needed to meet contract requirements.
