

Clinical Interoperability

Empowering providers with clinical data to drive better patient care and outcomes

Comprehensive, actionable patient clinical data from outside sources, seamlessly integrated into provider and care team workflows

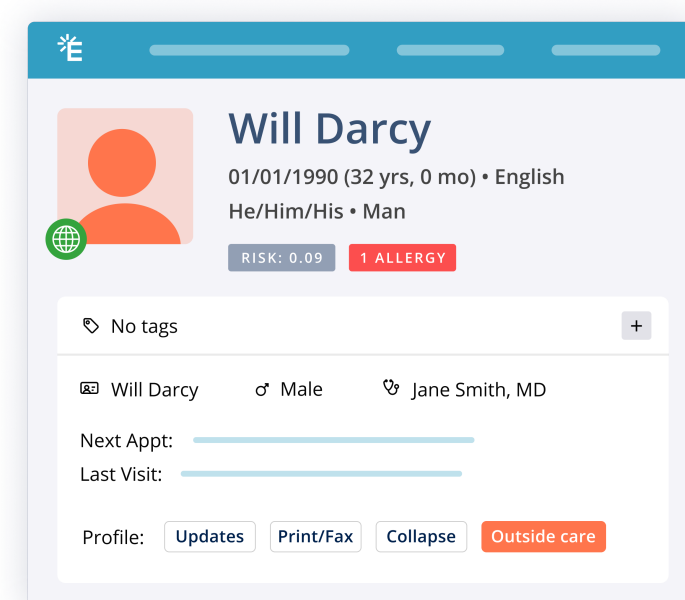

Full picture view of your patients + populations

Aggregate and reconcile data from across the healthcare continuum to build longitudinal health records that support more accurate clinical decision-making. Panel management is more effective when physicians have robust, cross-organizational data which they can use to stratify populations, reduce risk, and improve outcomes.

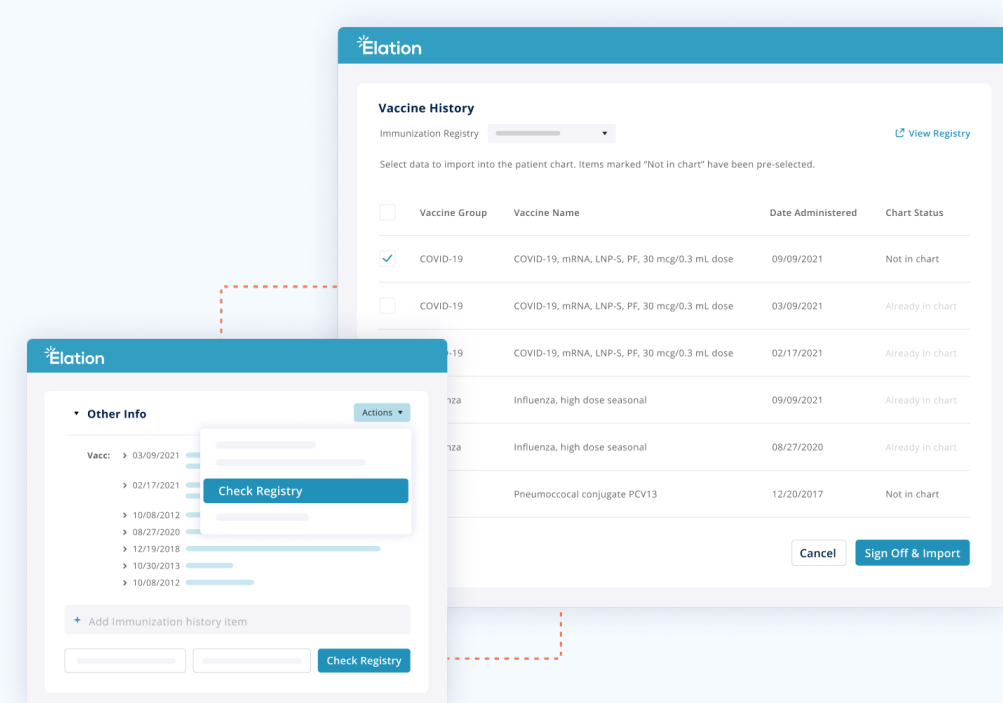

Insights at the point-of-care

Our interoperability tools are easy-to-use and thoughtfully integrated into clinical workflows with zero disruption to physician workflows or the patient visit, efficiently delivering the right information at exactly the right time.

Reduce burden and improve satisfaction

Quick, seamless access to outside information reduces administrative burden to maintain multiple logins, or track down paper and faxed records. Minimal clicks and fewer screens to navigate lead to reduced frustration, and improved physician satisfaction.

Improve patient safety

Enhances patient safety and reduces potential errors, delivering improved patient outcomes at lower costs

Broader community access

Leverages standard protocols and formats leading to improved community interoperability and secure, actionable, and reliable data.

Lower costs

Increases operational efficiency and lowers costs by reducing waste and duplication.

Empowering providers with clinical data to drive better patient care and outcomes

Clinical interoperability at scale

Robust data to drive impact at the point-of-care

 Laboratory + imaging	Bidirectional integration with large commercial labs, such as Labcorp, Quest, and Bioreference	Incoming radiology results from imaging centers + hospitals	Result reports file directly to chart, and delivered to provider's inbox
 Surescripts pharmacy + prescription monitoring programs	ePrescribing through Surescripts, along with EPCS using two-factor authentication	Automated and on-demand medication history downloads	SSO integration with state Prescription Monitoring Programs (PMPs)
 Health information exchange	Access to the Carequality interoperability network, providing connectivity to CommonWell and eHealth Exchange as well	Bidirectional Direct messaging for sending + receiving CCDs	Integrated workflows to import discrete data, such as problems, medications, immunizations, allergies, and demographics, from outside sources
 Vaccinations	Bidirectional integration with state immunization registries, as well as incoming vaccination history data from pharmacies	Single screen to document and report vaccinations with no additional clicks	Streamlined workflow to view vaccination histories and forecasts, and import discrete immunization history data
 Hospital + outside sources	Incoming hospital discharge summaries + notes	Quickly and easily send all results to patients through Patient Passport web or iOS app	Information from outside sources, such as results, reports, and CCDs, is filed to the patient's longitudinal record
