Electronic Prescribing

Everything you need to e-prescribe confidently within the clinical-EHR workflow

Simplifying point-of-care e-prescribing with insight and tools to keep patients safe and healthy, improve practice operation efficiency, and deliver phenomenal patient care at scale.

Actionable insights, confident care decisions, better patient safety

Increase patient safety and deliver better care with an accurate, view of prescribed and dispensed medication history, adverse allergy and drug alerts, and opioid usage via your state prescription drug monitoring program without leaving the patient chart.

Better outcomes, lower costs

Boost medication adherence and time to care with clinical workflow access to formulary information and affordable medication alternatives enabling better outcomes at lower costs.

Optimized clinical interoperability workflows

Electronic pharmacy interoperability replaces time consuming phone calls with real-time connectivity enabling secure prescription fill status, cancellation, change requests and automated medication history download and eligibility coverage updates.

ePrescribing On-the-Go

Remove barriers to timely care and securely ePrescribe wherever you are - in real time. Review the patient's chart and medication history at a glance, bulk refill, and electronically sign.
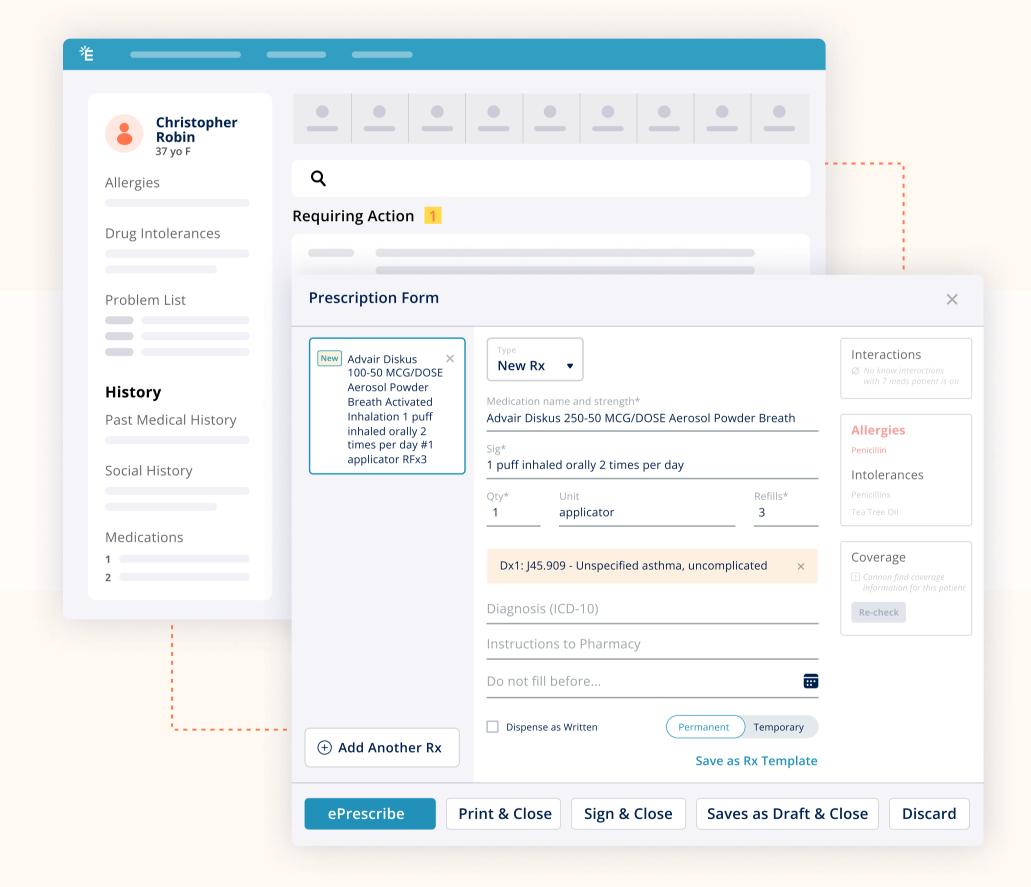

Patient Engagement

Patient Passport, an IOS mobile app, enables wellness beyond the point of care by empowering patients to view medication history, request refills and securely message physicians with questions.

Simplified Medication Sharing

Quickly and easily share current medications or a complete medication history with any collaborative care team member across the U.S. with our pre-populated provider database.
