

### Care for patients virtually with Elation's seamless Telehealth solution

**Elation** offers a single workflow for scheduling both in-person and telehealth visits, and fully **integrates virtual care** into your in-person care model.

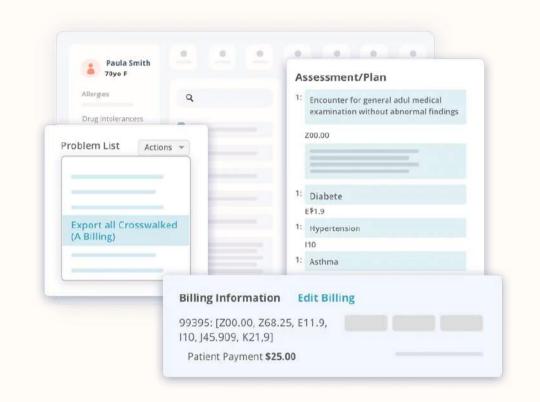

## Virtual care that feels like in-person care

Elation's HIPAA-compliant video platform, powered by Zoom, ensures practices can provide virtual care without having to implement or maintain a separate, disconnected solution. Our intuitive design doesn't disrupt your visit workflows or cause delays.

# Simple workflow for providers and patients

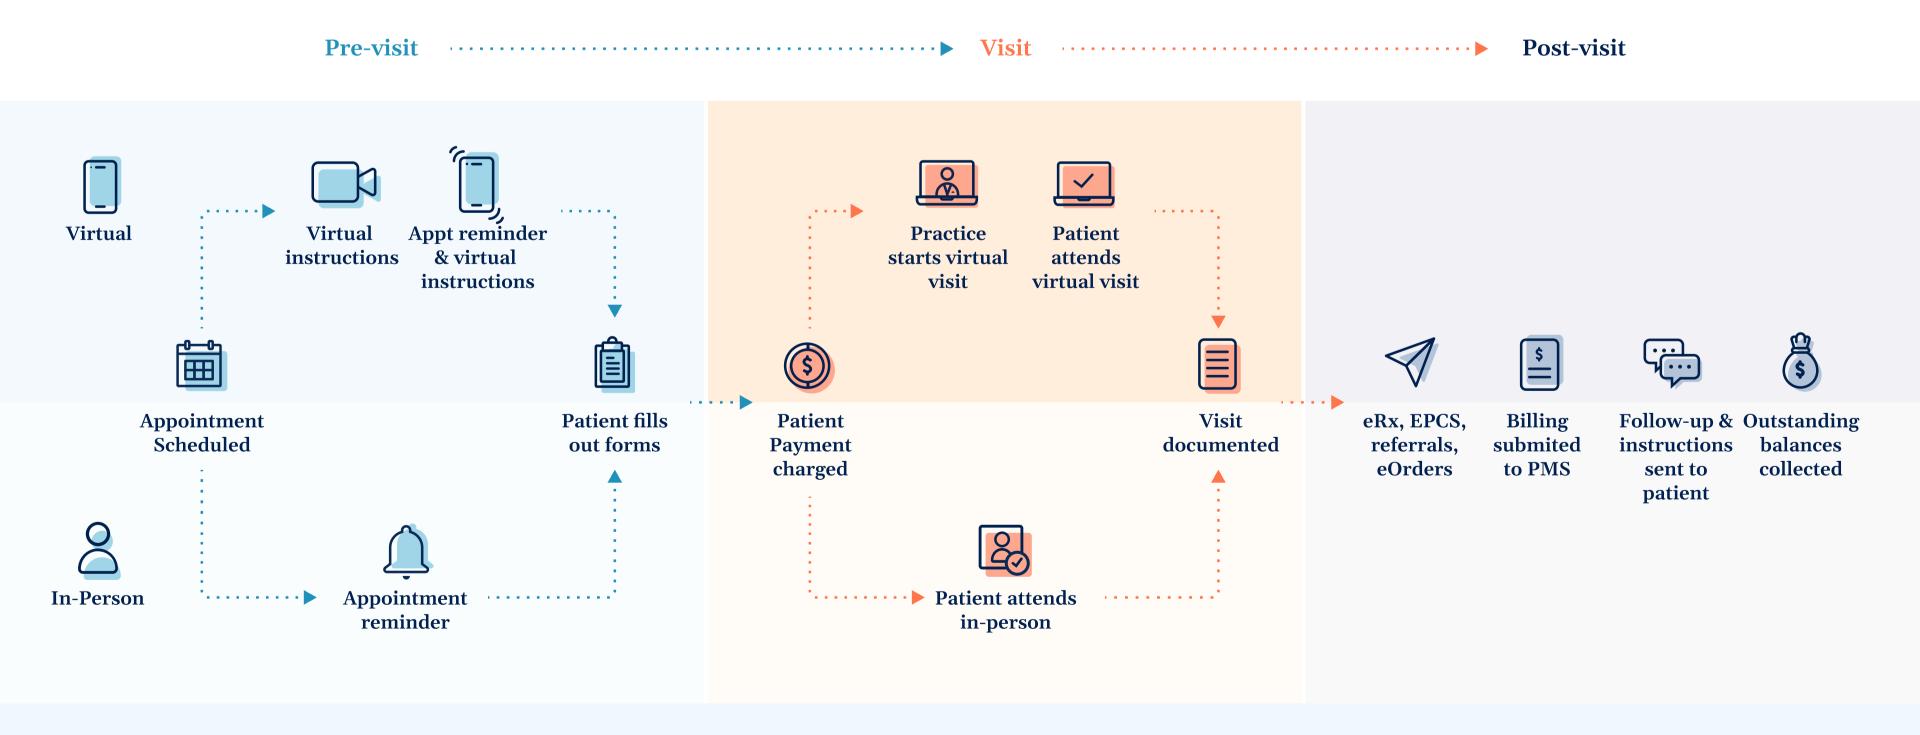

Just one click starts the visit and puts you in control, with no additional app downloads. Elation automatically generates everything patients need to quickly and easily join. Our intuitive three-panel view allows you to anchor the video feed so you can see and talk with the patient while simultaneously charting.

## Get paid for virtual care, without more overhead

Elation automates documentation and coding for virtual care, streamlining billing and reimbursements so you're paid what you're owed for the care provided.

#### Delivering consistency across both virtual and in-person experiences
